

Payne Permeability Cup

To determine the permeability of film of paints, Varnish etc. Film is gripped between a ring fitted with a seal and the cup which contains a quantity of water.

Then placed into a desiccator at 38° C. Periodic weighing every 24 hrs. indicates the loss of water that has permeated through the film.

- Complies with ASTM D 1653, ISO 7783

Ref.: 402 / 1 Payne Cup 10 cm²

Ref.: 402 / 2 TM Payne Cup 25 cm²
